Dependable Quality and Service That Lead The Industry

Suncrest EVERGREEN Nurseries

BOX 5

HOMER CITY, PENNA.

Dear Customer,

We welcome the opportunity to send you this copy of our new Wholesale Price List and Planting Guide. The many species of evergreens listed on the following pages have been carefully and scientifically grown from the finest seed strains available anywhere. Our quality stock combined with economical prices assures you of the best returns on your planting investment.

As always, we look forward to serving you on your evergreen planting needs and thank you in advance for your confidence and patronage.

Sincerely,

J. L. and M. L. Kopsach
Owners

MANAGEMENT

Mr. Lewis O. Long, well known throughout the Nursery industry and General Manager at Suncrest, is regularly available to visitors desiring information about Suncrest.

MEMBERS

We are members of: The American Association of Nurserymen, the National Mail Order Nurserymen's Association, Inc. and the Pennsylvania Christmas Tree Growers' Association.

NURSERY EXHIBITS

You are cordially invited to visit our exhibits at the following Nursery Trade Shows in January, 1961: The Pennsylvania Farm Show, Harrisburg, Pennsylvania, Section E., Booth No. 527, and The Ohio Christmas Tree Growers' Annual Meeting, Southern Hotel, Columbus, Ohio.

Terms and Ordering Information

All Prices F. O. B., Homer City, Penna.

Stock sent Parcel Post or Express Collect, whichever is cheaper, if directions are not given.

No order can be accepted for less than units of 25 of one variety and size except for stock listed singly. Twenty-five or more are sold at the 100 rate, 500 or more sold at the 1000 rate.

Pennsylvania residents must pay 4% Sales Tax on stock unless it is to be resold or for growing Christmas Trees. In these cases a signed tax exemption certificate must be filed with the nursery.

Minimum Order \$5.00 — Orders under \$5.00, add \$1.00 for handling charge. No C.O.D. on this size order.

Orders may be booked one-half cash with order, balance C. O. D.

Whenever possible we recommend that customers pick-up order at nursery. The average car will transport 10,000 to 25,000 2 yr. seedlings. Please advise 3 days prior to pick-up date.

Additional Information about Christmas tree growing can be obtained from County Agents and College Agricultural Departments. We will also do our best to answer any questions that you may have on tree growing.

Discounts on quantity orders.

Samples — Samples will be charged at 100 rate. Sold in multiples of 25 only.

Survival — We cannot guarantee survival of stock as we have no control of it after shipment is made.

If necessary to make a claim, this must be filed within five (5) days from receipt of shipment.

Fall shipment will begin about September 15th and continue as long as weather permits.

Spring shipment from latter March until new growth advances. Southern orders can be shipped prior to this date weather permitting. All stock is shipped in a dormant condition and can be safely transplanted. Trees will be shipped as close to your requested shipping date as weather permits.

We do not recommend the planting of northern grown evergreens in the South Coastal, deep South, or dry, hot areas of the Southwest. Northern grown evergreens should grow satisfactorily in the hilly and Appalachian Mountain districts of the South.

All stock is state and federally inspected.

Our Liability Ceases When Trees are delivered to Carrier.

This List Supersedes All Previous Price Lists

WE SUGGEST THAT YOU ORDER EARLY

Sales tax applies only to stock for Penna. destination

PENNSYLVANIA SALES TAX

Residents of Pennsylvania are subject to 4% sales tax on stock purchased from our Nursery, except on stock which is purchased for resale in its original form or for horticultural production (Christmas trees and ornamentals) in which case it will be necessary that this Sales Tax Exemption be completed and mailed with your order.

Out-of-State purchasers taking delivery at our Nursery are also subject to 4% sales tax, but have the same benefit of exemptions as Pennsylvania residents. Out-of-State purchasers ordering stock for shipment and delivery by common carrier are not subject to this sales tax.

TAX EXEMPTION CERTIFICATE

Commonwealth of Pennsylvania Sales and Use Tax, No. 381

Age of Nursery Stock

is denoted by a series of figures. A 2-0 series means that the seed was planted and grew two years in a seedbed, hence, it is a two year seedling. A 2-1 series indicates that the plant grew two years in the seed bed, was transplanted and grew one year in the transplant bed. The age of the stock is the sum of the numbers. Transplanting increases root development.

Special Tree Planting Tool for Hand Planting

A sturdy heavy duty planting tool that will last a lifetime. There is an offset on handle so that the top of the blade may be used as a step. The step is projected to provide sufficient room for the foot. A high carbon steel blade is forge-welded to shaft of heavy tubing. The blade is hammered to shape, ground to a point and heat treated to stand hard usage.

Price — \$7.50

Postage prepaid east of Mississippi River

Seedlings and Transplants

Pines are members of the Evergreen family which bear cones. Their needles are in clusters of 2, 3, and 5. The needles on the Scotch Pine are in clusters of 2 and are twisted. Those on the White Pine are in clusters of 5 are soft, slender and of bluish

green with white lines. The needles of the Red and Austrian Pine are 2 to a cluster, 4-5" long and rigid. Pines are hardy, relatively fast growing and will stand much shearing to increase bushiness. They are light loving and do best in sunny locations.

SCOTCH PINE

Selected strains of Scotch Pine have proven to be most suitable for growing Christmas Trees. Its natural qualities of pyramidal form, good needle retention, and rigid green needles have contributed greatly to its increasing popularity for the Yuletide market.

It is very hardy, and adapts itself well to heavy or light soils of average fertility. It may be transplanted easily and is one of the fastest growing members of the pine family, reaching a marketable Christmas Tree size after 7 to 8 years in the field. Besides being popular as a Christmas Tree it is also a stately tree for ornamental use, for windbreaks or for pulpwood.

Of the varieties listed below the Sun-Pride, Danish, French and Spanish are blue-green in cast, while the Special is a deep green color. At maturity, the Sun-Pride, French and Spanish have the shortest length needle, while the needle of the Danish is of medium length. The length of needle on a 2 yr. seedling is not necessarily indicative of the length of needle on the mature tree. We believe that all the strains of Scotch Pine offered here have desirable winter-holding color qualities under normal soil and climatic conditions.

SCOTCH PINE — Sun-Pride

Grown Exclusively by Suncrest			Per 100	Per 1000

Fast growing varieties recommended for timber and windbreak plantings, doing best on well drained soils. Prefer sunny positions.

JAPANESE BLACK PINE

			Per 100	Per 1000
3-yr. Seedlings	(3-0)	8-12"	6.00	35.00

Does well near the coast. A fast growing pine which is very tolerant of salt air, doing well in temperate coastal areas. At maturity it forms a broad pyramidal head with drooping branches and has bright green, sharply-pointed needles, 2 in a cluster, 4-6" long. The seed is from Northern Japan. It is in great demand for plantings near the seashore. Used as a single planting or in windbreaks. Hardy in North.

Seedlings and Transplants continued on next page

The unusually fine, healthy seedlings and transplants shown here illustrate the kind of planting stock you receive from Suncrest. Our seedlings are grown from the finest seed obtainable and under supervised growing conditions to develop as healthy and well balanced a seedling as possible. An area planted in Christmas Trees and properly managed will have a market value in 7 to 8 field growing seasons.

The demand for Christmas trees in Pennsylvania alone is presently estimated to be more than two million annually and increasing. Since every town and city offers a potential market, the local grower has the advantage of offering freshly cut trees with minimum costs in handling and delivery charges. This can best be accomplished by planting quality stock and following the good management procedures outlined on pages 11, 12 and 15.

Dependable Quality and Service That Lead The Industry

Seedlings and Transplants

continued

For Watershed or Conservation use, special grading and quantity quotations extended on request.

AUSTRIAN PINE

			Per 100	Per 1000
4-yr. Seedlings	(4-0)	12-15"	5.00	30.00
Root pruned.				
3-yr. Seedlings	(3-0)	8-12"	4.50	25.00

Has a pyramidal growth with stout branches. The needles are deep blue-green, stiff, 4-6" long and 2 to a cluster. It is very hardy, doing well in most types of soils. Largely disease resistant and does well in smoke and dust of cities making it desirable as an ornamental. Makes rapid growth. Ideal for ornamental, windbreak or soil erosion use.

WHITE PINE — Lake States

			Per 100	Per 1000
3-yr. Seedlings	(3-0)	8-12"	6.00	35.00
2-yr. Seedlings	(2-0)	4-8"	5.00	30.00

A beautiful evergreen for timber, ornamental, windbreak or Christmas Tree use. The needles are long, soft, blue-green with white lines and 5 to a cluster. Prefers a light sandy soil with plenty of moisture, but does well in a variety of soils. Soft foliage makes it a beautiful ornamental. Responds particularly well to shearing.

AMERICAN RED OR NORWAY PINE

3-yr. Seedlings	(3-0)	6-10"	5.00	30.00
-----------------	-------	-------	------	-------

A very rapid growing pine with long dark green, glossy and sharply pointed needles in clusters of 2. Very hardy, growing well in a variety of soils. Popular as a Christmas Tree in some areas. Also used in windbreaks and for timber.

MUGHO PINE — Extreme Dwarf, Tyrolean Strain

3-yr. Seedlings	(3-0)	5-10"	4.50	30.00
5-yr. Transplants	(3-2)	6-10"	12.50	xxxxx
(Limit 100 per customer)				

Compact bush-type Evergreen pine with stiff bright green needles 2" long and 2 to a bundle. It is very hardy and grows well in a variety of soils and exposures. Very easy to transplant and will stand much shearing. Highly popular for low lawn ornamental or for low hedge.

* We recommend that pine seedlings under 4" and Spruce, Fir and Hemlock seedlings under 8" be lined out in beds and cultivated for 2 years prior to field planting.

Firs and Spruces are slow growing members of the Pine family, growing mostly in the cool latitudes. They are conical or pyramidal in form and unsurpassed for their ornamental qualities. Firs have upright cones, flat needles which are usually soft to the touch. Spruces, on the other hand, have pendant cones, the needles usually four sided are stiff and sharp to the touch. Both may be used on northern slopes. Spruces require good drainage. Firs should not be planted in frost pockets. Because of their slower rate of growth neither requires as much shearing to encourage density as other evergreen members of the pine family.

DOUGLAS FIR — Blue-Gray Strain, Shuswap Lake

			Per 100	Per 1000
3-yr. Seedlings	(3-0)	8-12"	6.00	40.00
*2-yr. Seedlings	(2-0)	4-8"	5.00	30.00
3-yr. Transplants	(2-1)	4-7"	10.00	60.00

Douglas Fir

Unexcelled for all purposes. One of the fastest growing and most satisfactory evergreens for parks, home grounds, and Christmas Trees. It has horizontal branches with drooping branchlets, which are graceful and quite uniform. The flat bluish-green needles are about 1" long and are not heavy or coarse as in most firs. It is hardy, grows well in a variety of soils but does prefer deep, well-drained soil and will stand partial shade. Its typically straight trunk increases its demand among Christmas Tree buyers.

CONCOLOR WHITE FIR

4-yr. Seedlings	(4-0)	12-15"	10.00	55.00
Root pruned.				
*3-yr. Seedlings	(3-0)	5-9"	7.00	40.00
5-yr. Transplants	(3-2)	8-12"	20.00	xxxxx

One of the most beautiful of the cone bearing trees. Its needles are bluish-green and the new growth is light colored. The smooth gray bark of the trunk and branches adds to its beauty and coloring giving the tree a silver blue to green hue. Needles are flat, soft and 1½ to 2" long. Needs good drainage, grows well after it has become established and will do well in a variety of soils. This is a beautiful ornamental. Used for Christmas Trees and Timber.

BALSAM FIR — Deep Green

*3-yr. Seedlings	(3-0)	4-7"	5.50	35.00
6-yr. Transplants	(3-3)	10-14"	15.00	xxxxx
4-yr. Transplants	(3-1)	5-8"	10.00	60.00

A beautiful evergreen — growing best at higher altitudes and Northern areas. Prefers cool, moist, and sheltered location. Its color is deep blue-green with short, round tip, flat needles, 1" long — which are glossy on the upper side and lighter on the under side. Balsam needles are very fragrant. Used extensively for Christmas Trees and excellent as an ornamental.

COLORADO BLUE SPRUCE

			Per 100	Per 1000
4-yr. Seedlings	(4-0)	10-14"	10.00	60.00
Root pruned.				
3-yr. Seedlings	(3-0)	8-12"	8.00	50.00
*2-yr. Seedlings	(2-0)	4-8"	5.50	35.00
*2-yr. Seedlings	(2-0)	3-5"	3.50	22.50
4-yr. Trans.	(2-2)	5-10"	12.50	80.00

One of our handsomest native trees, widely grown for background or individual specimen plantings. Trees grow slowly when young but after six or seven years growth rate increases. Very hardy, doing well in a variety of soils. Range in color from green to blue-green to silvery blue. One of the most popular for ornamental and Christmas Tree use.

BLACK HILLS SPRUCE

			Per 100	Per 1000
4-yr. Seedlings	(4-0)	10-14"	6.00	35.00
3-yr. Seedlings	(3-0)	5-10"	4.50	27.50
*2-yr. Seedlings	(2-0)	3-5"	3.00	18.00
5-yr. Transplants	(2-3)	8-11"	10.00	75.00

A very compact spruce being very hardy and able to withstand severe climates. Adaptable to a variety of soils, best spruce for dry country planting. It is slow growing which is an advantage when planted on home grounds as it stays small for many years and is an attractive ornamental, as well as being fine for table size Christmas Trees.

HONDO SPRUCE

*3-yr. Seedlings	(3-0)	4-6"	6.00	30.00
------------------	-------	------	------	-------

From Orient, very fine needle texture, soft greenish blue hue.

BLACK SPRUCE

4-yr. Seedlings	(4-0)	12-15"	6.00	32.00
-----------------	-------	--------	------	-------

Root pruned. Does well in moist soil.

NORWAY SPRUCE

4-yr. Seedlings	(4-0)	12-16"	7.00	45.00
Root pruned.				
3-yr. Seedlings	(3-0)	8-12"	6.00	35.00
*2-yr. Seedlings	(2-0)	4-8"	4.00	25.00
*2-yr. Seedlings	(2-0)	3-5"	3.00	18.00
6-yr. Transplants	(3-3)	12-18"	10.00	75.00
4-yr. Transplants	(2-2)	7-12"	9.00	60.00

Tall pyramidal tree with horizontal branches and drooping branchlets with shiny dark green needles. Although a native of Europe it is one of the commonest of cultivated evergreens in the Eastern United States. Very hardy, preferring a cool moist climate, and well drained soil, but is adaptable to many soil conditions. Growth rate more rapid than any other spruce. Most widely planted spruce for Christmas Trees and windbreaks.

WHITE SPRUCE

4-yr. Seedlings	(4-0)	12-15"	7.00	45.00
Root pruned.				
3-yr. Seedlings	(3-0)	8-12"	6.00	35.00
*2-yr. Seedlings	(2-0)	4-8"	4.00	25.00
*2-yr. Seedlings	(2-0)	3-5"	3.00	18.00
6-yr. Transplants	(3-3)	12-15"	10.00	75.00
4-yr. Transplants	(2-2)	9-12"	9.00	60.00

More dense growth habit than the Norway Spruce and grows almost as fast. The branches are ascending with drooping branchlets, needles somewhat bluish green with a strong aromatic odor when crushed. Foliage dense and close in young trees, making them highly ornamental. Used for Christmas Trees, wind-break and ornamentals. Very hardy, preferring cool climate.

White Spruce Seedling

White Spruce Mature Tree

* Note box on preceeding page

VEITCHII FIR

			Per 100	Per 1000
*3-yr. Seedlings	(3-0)	3-6"	7.00	xxxxx

Very hardy, slow growing, new growth appears in late spring. Soft needles, about 1" long, are glossy, rich holly-green on upper side with a striking light blue with white line on under side. Unusually decorative tree. Prefers sunny position.

FIRMA FIR

*3-yr. Seedlings	(3-0)	4-8"	7.50	xxxxx
------------------	-------	------	------	-------

Seed from Japan. Distinctive needle formation makes this a picturesque ornamental.

ENGELMANN BLUE SPRUCE

3-yr. Seedlings	(3-0)	8-11"	6.00	35.00
Root pruned.				
*2-yr. Seedlings	(2-0)	4-8"	4.00	25.00
*2-yr. Seedlings	(2-0)	3-5"	3.00	18.00

Branches grow in close whorls forming a slender pyramidal tree making it a much more graceful tree than some of the other spruces. Needles bluish green to steel blue. Blue color shows mostly in winter and makes it a very popular one for Christmas Tree use as well as an ornamental. Hardy, slow growing, doing well on northern exposures. Seed produces good percentage of blue trees.

SITKA SPRUCE — Hardy, Slow Growing

3-yr. Seedlings	(3-0)	10-14"	4.50	20.00
-----------------	-------	--------	------	-------

Root pruned.

In the days of sailing vessels, masts were made of this spruce. Native to Alaska and Northwest, U.S. and Canada. Narrow and tall in form.

Dependable Quality and Service That Lead The Industry

Canadian Hemlock

Needles are soft, flat, dark on upper side and silver-green on under side. The hemlocks are less formal in outline than the firs or spruces, for though their limbs spread horizontally, they branch repeatedly into many small branchlets which droop most gracefully. Their fine, feathery foliage creates great beauty. They will withstand severe pruning and therefore are often used as hedges. Their fibrous root system makes them easy to transplant. Do well in full sun or partial shade, and prefer an acid, well drained soil with plenty of moisture. Holds dark green color during winter months. Makes beautiful hedges as well as a stately ornamental.

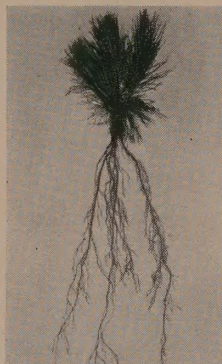

CANADIAN HEMLOCK

			Per 100	Per 1000
5-yr. Transplants	(3-2)	15-20"	35.00	xxxxx
5-yr. Transplants	(3-2)	12-15"	27.50	xxxxx

SIEBOLDI HEMLOCK

3-yr. Seedlings	(3-0)	8-12"	7.00	40.00
-----------------	-------	-------	------	-------

Similar to Canadian Hemlock — but is generally shrubby as cultivated in this country. Seed from the Orient. Long, glossy needles resembling those of the Yew. Very unusual tree.

Mugho Pine

Will stand much shearing; extensively used for ornamental, foundation and rock garden plantings.

MUGHO PINE — Extreme Dwarf, Tyrolean Strain

3-yr. Seedlings	(3-0)	5-10"	4.50	30.00
5-yr. Transplants	(3-2)	6-10"	12.50	xxxxx

AMERICAN ARBORVITAE

3-yr. Seedlings	(3-0)	8-14"	7.00	35.00
2-yr. Seedlings	(2-0)	5-9"	5.50	28.00
4-yr. Transplants	(2-2)	9-12"	15.00	xxxxx

Very popular for ornamental and hedge plantings.

JUNIPER SCOPULORUM

3-yr. Seedlings	(3-0)	8-12"	5.00	30.00
-----------------	-------	-------	------	-------

Root pruned.

Upright, blue-green to silver tip, readily adaptable to small areas, for corner foundation plantings. Should be sheared yearly.

YEW CAPITATA — Grown from seed.

3-yr. Seedlings	(3-0)	4-6"	9.00	75.00
4-yr. Trans.	(3-1)	4-8"	15.00	110.00

An upright form of the Japanese Yew, conical. See Yew information next column.

GINKGO BILOBA

3-yr. Seedlings	(3-0)	10-14"	6.00	xxxxx
-----------------	-------	--------	------	-------

Root pruned.

Shade tree 60 ft. at maturity, has exotic open growth, fan shaped leaves turning yellow in fall. Free of insects and disease. Grows well in smoke and dust of cities.

MULTIFLORA ROSE (Top pruned)

2-yr. Seedlings	(2-0)	5-10"	3.50	25.00
-----------------	-------	-------	------	-------

Thorny, upright type for living fences and hedges. Planting instructions sent with shipping notice.

Suncrest Ornamentals

See Pages 11, 12

With the present day accent on out-door living attention is increasingly focused on foundation and garden plantings.

The following suggestions are designed to aid you in selecting stock which will enhance the beauty of your home and grounds. Many of the larger transplants may be placed in their permanent locations, while the seedlings and smaller transplants are ideal for lining out in cultivated beds for future foundation and ornamental planting.

To Help In Your

The globes, spreaders and semi-spreaders are particularly suitable for under windows or wherever low growth is desirable. The Spreaders are frequently used in corner plantings to aid in adding breadth.

Upright — Columnar

Yew Capitata
Yew Hicksi
Juniper Scopulorum
Juniper Fastigiata
American Arborvitae

Semi-spreading

Hetzi Juniper
Savin Juniper
(Sold by measure of spread.)

Yew is the common name for *Taxus*, a class of evergreen shrubs of slow growth and of great value for many planting purposes. Their needles are broader than those of the fir and spruce and extend on either side of the stems, producing a flattened soft effect. The rich dark green foliage remains green through-out the year and in fall many of the plants are colorful with bright red berries. Yew stand hard shearing well and being of dense habit, make good hedge and foundation plants. A rather moist loamy soil suits them best, but they grow well in ordinary soil with plenty of humus and do well in sun or shade. The Capitata which we offer has been grown from seed, the Cuspidata and Hicksi forms are from Rooted Cuttings. Yew are very hardy.

†YEW CUSPIDATA — Spreader

		Per each	4 or more
Transplants	12-14"	.90	.85

Deep green, spreading type. Graceful short branches covered with waxen foliage.

†YEW HICKSI — Upright

Transplants	10-14"	.90	.85
-------------	--------	-----	-----

Rich, dark, glossy green in color. Develops a main stem with numerous branches that ascend almost vertically.

WHITE SPRUCE

Transplants	14-18"	.40	.30
-------------	--------	-----	-----

Stately evergreen requiring minimum shearing.

DOUGLAS FIR

Transplants	4-7"	.30	.25
-------------	------	-----	-----

Ornamental for lawn or roadside planting.

†GLOBE ARBORVITAE (Woodwardii)

Transplants	10-14"	.90	.85
-------------	--------	-----	-----

Very popular for foundation groupings and borders. Deep green foliage. Recommended for Memorial plantings. Shear annually.

COLORADO BLUE SPRUCE

Seedlings	10-14"	.20	.xx
-----------	--------	-----	-----

Root pruned.

This species is very compact with straight stem. A beautiful tree for landscape planting and Christmas Trees.

† Stock grown from Rooted Cuttings.

Plant Lining-Out Stock

See Pages 11, 12 and 15

Yew, Arborvitae, Juniper, and Mugho Pine are all considered hardy plants. They all respond well to shearing.

The pines, spruces, firs and hemlocks may be sheared to desired height and will develop into stately trees which add to the beauty and value of your property. All have wide use in landscaping, screening, roadside plantings, memorial parks and windbreaks.

In Your Selection

The columnar and pyramidal types are used at doorways and corners for accent.

For hedges we recommend Yew (*Taxus*), Arborvitae, Mugho Pine or Hemlock. All respond well to shearing.

Spreading

Yew Cuspidata
Pfitzer Juniper
Andorra Juniper
Mugho Pine
(Sold by measure of spread.)

Pyramidal

American Arborvitae
Spiny Greek Juniper
Juniper Scopulorum
Retinspora Plumosa

BLACK HILLS SPRUCE

		Per each	4 or more
Transplants	8-11"	.40	.30

Its compact growth habit makes it desirable for ornamental use.

†JUNIPER FASTIGIATA (IRISH) — Upright

Transplants	15-20"	1.15	1.00
-------------	--------	------	------

Blue green, columnar shaped. For doorway or corner accent.

†ANDORRA JUNIPER — Low Spreader

Transplants	12-18"	1.25	1.15
-------------	--------	------	------

Green color in summer turning after first frost to a purple color. Excellent for foundation, rock garden and terrace plantings.

†RETINSPORA PLUMOSA — Conical

Transplants	12-16"	1.15	1.00

--------------	-----------

Scarlet, Deep Red and Yellow Blotch.

AMERICAN ARBORVITAE

		Per each	4 or more
Transplants	9-12"	.30	.25

A hardy evergreen with compact pyramidal or columnar form. Grows best in cool, moist locations preferring a sandy loam or sandy soil with water near the surface. The foliage is dense, frond-like, varying from dark green to light green during growing season. Density increased by shearing, growth is more luxuriant in sheltered location. Garden plans have found extensive use for Arborvitae as screens and hedges. (Common error is to plant too closely for immediate screen effect and fail to separate plants every two or three years). If screened by some larger evergreen such as a row of pines to break sharp winter winds, growth will be more luxuriant.

MUGHO PINE — Extreme dwarf, Tyrolean Strain.

Transplants	6-10"	.30	.25
-------------	-------	-----	-----

Extensively used for foundation and rock garden plantings.

BALSAM FIR

Transplants	10-14"	.50	.40
-------------	--------	-----	-----

Narrow needles about an inch long are glossy on the upper side and lighter on the under side.

† Stock grown from Rooted Cuttings.

Junipers are evergreen shrub members of the Pine family with small needle-like leaves, in varied tones of green. They include some of the best ornamentals, much used in landscaping. The majority are hardy, even in the coldest parts of the U. S. preferring rather dry sandy or gravelly soil with full exposure to the sun and wind, but tolerate average garden conditions. They do not like shade or wet ground. In form Junipers vary from dense columnar trees to trailing ground-cover. Of the smaller upright columnar forms we offer, the Irish (*Fastigiata*) is narrow and quick growing; the Spiny Greek is slower growing and more compact.

The Pfitzer is a medium, irregularly spreading form of rich blue-green color and is an indispensable evergreen for foundation planting and border. The Savin is a deeper green and has a more vase-like upright growth. The Hetzi is an upright spreader growing taller than the Pfitzer and has a lighter blue-green color. It is a very fast grower and must be sheared yearly. The Andorra is a lower growing broad plant, seldom growing over 12" in height and is excellent for ground cover in full sun or to hold steep banks. Colors of Junipers often vary with the seasons turning a purplish tone with hard frosts. Juniper's chief requirements are sunlight, drainage and cultivation.

†PFITZER JUNIPER — Spreader

		Per each	4 or more
Transplants	16-20"	1.50	1.35
Transplants	12-16"	1.15	1.00

One of the most popular dark green, low, spreading types.

†HETZI JUNIPER — Semi-Spreader

Transplants	12-15"	1.15	1.00
-------------	--------	------	------

Similar to Pfitzer, blue-green, growing faster and more upright.

†SPINY GREEK JUNIPER — Pyramidal

Transplants	12-16"	1.25	1.10
-------------	--------	------	------

Ideal for ornamental and memorial planting. Fine, blue-green foliage.

†SAVIN (SABINA) JUNIPER — Semi-Spreader

Transplants	12-15"	1.25	1.15
-------------	--------	------	------

Dark green foliage, semi-spreader. Vase-like form. Excellent ornamental.

CANADIAN HEMLOCK

Transplants	15-20"	.50	.40
-------------	--------	-----	-----

Flat needles, dark on upper side and silver-green on under side. Beautiful for hedges. Holds color during winter months.

NORWAY SPRUCE

Transplants	12-18"	.40	.30
-------------	--------	-----	-----

Special strain, dark green, fast growing, straight leader.

CONCOLOR WHITE FIR

Transplants	12-15"	.50	.40
-------------	--------	-----	-----

Excellent for ornamental use, this beautiful, hardy tree will withstand very low or high temperatures. Bluish-green in color.

A nice assortment of evergreens to beautify your grounds. All seedlings are four years old and have been root pruned. Fine variety as to color variation and needle texture. An outstanding buy for screening, hedging and specimen planting.

Planting Guide Information

General and for Ornamental Stock

(See Page 12 for Christmas Tree Information)

WHEN YOUR STOCK ARRIVES—Remove from shipping containers, dip roots in muddy water and plant as soon as possible (cool of the day best). If heeling-in is necessary, select a protected area away from wind and sun, dig a V-shaped trench, open bundles and spread stock out, cover roots with soil and keep moist.

Caution: Keep roots moist, but not flooded. **Never let roots dry out.**

PLANTING—Dig a hole large enough to spread roots out, plant at same depth as stock grew in nursery. Add best soil around roots, tamp lightly and water, add rest of soil leaving saucer-like depression around trunk to catch rain. Water again. **Be sure to eliminate air pockets.**

SPACING—Place far enough apart or from foundation for air circulation and growth. Consider the adult size of stock.

WHEN TO PLANT—Spring is regarded as the best time to plant. However, on the lighter type soils, the ground usually has enough moisture from September 15 to October 30 for fall planting. If possible, mulch fall planted stock and by all means watch it during the winter months for heaving. The thawing and freezing action of the winter may heave stock, this is particularly true with heavy soils. If stock is heaved firm the soil around the roots and mulch.

SPRAYING—Should be done in the cool and still of the day. A spray or dust containing 5% Malathion is excellent but others are good when spraying near livestock or vegetables.

WATERING—Water until late December if needed. If there is moisture 2" below the surface then do not water. Watch during winter months for heaving.

FERTILIZING—Evergreens prefer a slightly acid soil so never add lime. The following summer, after the stock is established, add about a quarter of a cup of 10-6-4 fertilizer in a 6" radius around the trunk. Fertilizer burns foliage so have care here.

PRUNING—Adds density and shapeliness to stock. Pines are pruned in late June, Arborvitae in July and the other species in the fall. Yew, Juniper and Arborvitae are all considered hardy and respond well to shearing. Hemlock, Pine, Spruce and Fir may be sheared to any desired height.

PLACEMENT—Consider the natural habits of the plant, in domesticity its requirements are largely the same.

Rhododendron and Azalea prefer partial shade and protection from strong winds.

Junipers prefer full sun and need good drainage.

Yew and Hemlock do well in sun or shade and will withstand quite severe winter winds.

EVERGREEN PLANTINGS should be 2 feet or more from the foundation of house. During winter months the heat from the basement gradually penetrates the cellar wall and tends to dry out the soil around the foundation. If shrubs are too close to foundation wall the drying of soil will kill the stock.

Windbreak, Hedge or Screen Suggestions

			Per 100	Per 1000
Austrian Pine	4-0	12-15"	6.00	35.00
Scotch Pine	4-0	12-15"	5.50	30.00
White Pine	3-0	8-12"	6.00	35.00
Canadian Hemlock	3-2	12-20"	35.00	xxxxx
American Arborvitae ...	3-2	9-12"	15.00	xxxxx
Mugho Pine	3-2	6-10"	12.50	xxxxx

Also any of the Spruce or Yew.

All of the above are considered hardy and respond well to shearing. Beautiful the year around.

Landscaping Hints

The purpose of FOUNDATION PLANTING is to soften the lines of the house and to make a gradual transition from the house to the lawn. A home assumes a cozy appearance when it rises out of shrubbery.

The harshest lines are the vertical lines of the OUTSIDE CORNERS, so the heaviest plantings should be near the outer corners. Carry the front foundation planting well around the corner of the house. Corner plantings may extend in height two-thirds of the distance from ground to eaves. Use tall or medium shrubs at corners with lower-growing shrubs and ground cover at base.

The FRONT ENTRANCE is considered the focal point of the house and attention is brought to it in many ways. It may be perfectly balanced with the same planting on either side of the doorway.

If the doorway is not in the center, then it is pleasing to place a large shrub on the short side of the house, with a lower shrub on the other side, using a more massive corner planting on this side to restore balance.

To focus attention on the entrance use high plantings at the corners and low shrubs at the doorway. Either very low shrubs or ground cover plants may tie in the doorway and corner plantings.

DRIVEWAYS require some thought. When planting in this area remember to eliminate traffic hazards such as blocking view in either direction or snow traps. Remember that in the winter time, snow plows throw snow, cinders, and salt far and wide. Here, remember to plant far enough from drive or road to eliminate any possible damage to stock.

Many landscape planners suggest a few well-placed trees for framing and background.

The MAIN LAWN AREAS should be left mostly open for spaciousness and ease of mowing. A few well chosen specimen plantings in the evergreen or flowering tree families add attractiveness.

The modern trend toward enjoyment of outdoor relaxation requires some thought toward a PRIVATE FAMILY AREA. If at all possible, this area should be located for comfort on the protected side of the house or where there is cooling from existing trees. Ideally it should be screened from the highway, open to distant views, and easily viewed from indoors. For this you will want trees for background and shade, plenty of open space for activity and the major plantings at the boundaries. Here, hedge material may be well used. Less formal is the planting of two or three shrubs in clumps or by the use of fencing either alone or in combination with shrubs. The screening depends upon the amount of privacy you wish.

Dependable Quality and Service That Lead The Industry

Christmas Tree Planting Information

Please read the general information on page 11, as much of it applies here, too.

Care Of Stock To Be Planted

Here is important information to remember: Remove seedlings promptly from shipping containers. Dip roots in water and plant as soon as possible. Puddle trees in mud before planting. Do not let roots dry out at any time. Set tree about the same depth that it grew at the nursery. Firm the ground around the roots. If heel-in is necessary select a well protected area away from sun and winds. Dig a trench about 6 to 8 inches deep, V-shaped at about 45 degrees. Cover roots with damp soil and keep well watered until planting time.

Caution: keep roots moist, but don't keep them flooded.

Sizes For Field Planting

For planting directly in the field we recommend 2 or 3 year old Scotch Pine and 3 year old seedlings of other varieties of pine. We firmly recommend that only 3 year old seedlings 8" and over, or 2-2 transplants, in Spruce and Fir be planted directly in the field. In either case the weed competition should be controlled. Transplanting develops a better root system.

We recommend that pine seedlings under 4" and Spruce, Fir and Hemlock seedlings under 8" be lined out in beds and cultivated for 2 years prior to field planting.

Length of shoot should not be the only consideration in purchasing planting stock. The leader height should be well balanced with a root system capable of supplying the shoot. Stock is measured from the ground level to tree tip.

Kinds Of Trees To Plant

Scotch Pine is in demand in most of the large markets and the demand for it is increasing. Local market demand, future estimates of that market and quality of the planting site should govern the choice of species planted. We suggest that the novice study his market possibilities and consult his local County Agriculture Agent for his market potentialities.

For growers interested in a diversified planting, the following proportions are suggested: 75% in the Pine family, and the remaining 25% in the Spruce and Fir families.

Planting Distance and Number Of Trees Per Acre

4 x 4 feet each way requires 2,720 trees per acre; 5 x 5 feet each way requires 1,720; 6 x 6 feet each way requires 1,210 per acre. About 4 x 5 feet spacing each way on Spruce and Fir is best, and 5 x 6 feet spacing each way is best for varieties of pine. If it appears that mowing or other tree care will be necessary, consider this in the spacing. Where it is possible, keep rows straight.

When To Plant

We have learned from our own plantings over the years that Early Spring is the best time to plant. Start just as soon as possible after the ground is frost free and there is no more danger of a heavy frost. In our area this period usually occurs in early April, and planting can be continued as long as ground and weather conditions permit. We recommend fall planting only to experienced growers and where soil conditions permit. For those planning Fall planting it is best to consult your local or County Agriculture Agent regarding time, terrain, etc. The thawing and freezing action in the

soil may heave the roots—this is particularly true in heavy soil. September 15 to October 30 is usually the best time as the ground is tempered and has more moisture.

Planting Methods

Hand planting suggestion: Line out the rows with stakes at intervals. Each planter uses a planting bucket with roots covered with muddy water. Use a special tree planting tool to open hole. Where this method is used the trees are slit into the ground. Be sure and plant very firmly by using the heel of shoe. One man should plant nearly 1,000 seedlings in an 8-hour day.

On large plantings, tree planting machines are rapidly replacing hand planting. A crew of 4 men can plant 6,000 to 10,000 in an 8-hour day. Planting machines can be contracted for doing the work at a cost of about \$15.00 to \$20.00 per 1,000 trees. Planting contractors can be obtained in certain areas. They should be contacted a few months in advance of required planting.

Scotch Pine

Suggestions and Care

The planting area should not be plowed as some grass and weeds will be an advantage for the first two years after planting. If grass becomes too high, use power driven mower, never a hand scythe as many of the tops of the planted trees will be cut off. Do not use fertilizer as this increases the growth of weeds as well as the trees. Land of average fertility is favored over rich soil. Pines in most varieties can be planted in grass sod and kept mowed if the grass is of high growth. For Christmas Tree growing, mowing between the rows is usually required the first to third years.

Keep all brush cut out by going over the plantation each Spring and Fall. During the second year clip off one shoot in cases where a double top develops. This can be incorporated with a brushing operation. Do not permit livestock to graze as they will do serious damage. Fire is a hazard and we suggest that roads and fire breaks

Christmas Tree Planting Information

continued from page 12

be made so that fire can be readily controlled. Watch for dead shoots and defoliated branches as these indicate insect damage. Contact a local forestry unit or your county agent for control instructions before serious damage occurs.

Shearing

Shearing is performed to increase the number of buds and therefore the density and shapeliness of the tree. It should be started when the trees are 2-3 ft. tall, about the fourth year, and continued annually until the trees are ready to harvest. Not all trees will need pruning each year; shear only those that appear to be growing too rapidly or are becoming unshapely. Caution is the key, as over-sheared trees have an artificial appearance.

The time to shear is when the new buds are just forming and height growth is incomplete, as at this time new buds will form on the cut ends of the branches. The time to shear varies with the region, the season, and new growth development. In Pennsylvania, pines are sheared in June, Spruces and Firs during July and Spruces may be safely sheared in August.

The hedge shear with 8-9" blades is most commonly used. Only growth of the current season should be sheared unless some radical change in the tree form is to be made. First, attention is given to the terminal shoot, which is cut back to 10-12" from the whorl and cut on a sharp angle to lessen the possibility of developing a double leader. The laterals of this top-most whorl are pruned about 2" shorter than the terminal.

Next, lateral branches which are developing too much growth are sheared to encourage good tree outline. Here, it may be necessary to remove some old growth back to the next whorl of branches if the tree is becoming unshapely.

Remember, use caution in shearing and treat every tree individually. The novice is strongly urged to attend shearing demonstrations sponsored by State Associations and Experimental Stations.

Double leaders should be reduced to one leader immediately regardless of age of tree.

Selling Suggestions

If you are not near a market, place a "FOR SALE" ad covering your trees in one of your large city papers. Run the ad in early fall and not later than the 1st of October. Require a deposit on each sale and apply same on the last truck load of the order. Sell for cash or certified check if the customer is unknown to you. Never sell on credit as even some of the better buyers will make a claim on a bad year when there is an over supply. Buyers may overstock heavily and the grower is not obliged to assume the risk. Many customers are 400 miles or more from the tree farm.

When selling WHOLESALE never permit the buyer to select and cut trees unless the grower is with him. Most growers cut and grade their own trees at a prearranged price.

For RETAIL selling some growers permit a customer to select and cut his own tree, but it is still wise to have one of your men with the buyer.
